

## ABSTRACT

Agis Tinia Sari. 2023. "The Effect of the Application of the Qiro'ati Nahawand Method on the Ability to Read the Qur'an of Students at MTs. Darul Ulum Wudi Sambeng Lamongan". Thesis. Lamongan Islamic University.

This study entitled The Effect of Applying the Qiro'ati Nahawand Method on Students' Al-Quran Reading Ability at MTs. Darul Ulum Wudi Sambeng Lamongan. Using quantitative research types and approaches in the form of questionnaires, documentation, observation, the purpose of this research is to find out how the effect of applying the qiroati nahawand method is, to find out how the ability to read the Qur'an, and to find out how the effect of applying the qiro'ati nahawand method is to the ability reading the Koran students at MTs. Darul Ulum Wudi Sambeng Lamongan. The results of this study, the first is that the application of the qiroati nahawan method is quite good, this is proven by the questionnaire distributed to all students at MTs. Darul Ulum Wudi Sambeng Lamongan with a result of 70% - 85% namely 77%, the second result of the ability to read the Qur'an is proven to be classified as good criteria because it is in the interval between 75-89 which has an average value of 82.6 . The third is to determine the effect of the application of the qiro'ati nahawand method on students' ability to read the Koran at MTS. Darul Ulum Wudi Sambeng Lamongan. The constant value shows the positive influence of the independent variable (X) on the dependent variable (Y), meaning that if the value of X increases, the value of Y will also increase and if the value of X decreases, the value of Y will also decrease. In addition, if the X value is zero, the Y value is equal to the constant value, which is 37,784. The regression coefficient b with a value of 612 has a major influence on the application of the qiroati Nahawand method, and based on the magnitude of the correlation value/relationship with a value of 0.887 which, if seen from the interpretation table, is between 0.80-1,000 indicating that between the X variables and Y variables there is a very strong relationship.

**Keywords:** *Application of the Qiro'ati Nahawand Method, Ability to Read the Qur'an.*

## ABSTRAK

Agis Tinia Sari. 2023. **“Pengaruh Penerapan Metode Qiro’ati Nahawand terhadap Kemampuan Membaca Al-Qur’an Siswa di MTs. Darul Ulum Wudi Sambeng Lamongan”**. Skripsi. Universitas Islam Lamongan.

Penelitian ini berjudul Pengaruh Penerapan Metode Qiro’ati Nahawand terhadap Kemampuan Membaca Al-Quran Siswa di MTs. Darul Ulum Wudi Sambeng Lamongan. Menggunakan jenis penelitian kuantitatif serta pendekatan berupa angket, dokumentasi, observasi, tujuan dari penelitian ini adalah untuk mengetahui bagaimana pengaruh penerapan metode qiroati nahawand, mengetahui bagaimana kemampuan membaca Al-Qur’an, dan untuk mengetahui bagaimana pengaruh penerapan metode qiro’ati na hawand terhadap kemampuan membaca Al-Qur’an siswa di MTs. Darul Ulum Wudi Sambeng Lamongan. Hasil dari penelitian ini, yang pertama adalah penerapan metode qiroati nahawan tergolong baik, hal ini terbukti berdasarkan angket yang disebarakan kepada seluruh siswa di MTs. Darul Ulum Wudi Sambeng Lamongan dengan hasil 70%-85% yakni 77%, yang kedua hasil dari kemampuan membaca Al-Qur’an terbukti dengan tergolong pada kriteria baik karena berada pada interfal antara 75-89 yakni memiliki nilai rata-rata 82,6. Yang ketiga untuk mengetahui pengaruh penerapan metode qiro’ati nahawand terhadap kemampuan membaca Al-Qur’an siswa di MTs. Darul Ulum Wudi Sambeng Lamongan. Nilai konstanta menunjukkan pengaruh positif variabel independen (X) terhadap variabel dipenden (Y), artinya jika nilai X meningkat maka nilai Y juga akan meningkat dan jika nilai X turun maka nilai Y juga akan turun. Selain itu, apabila nilai X sama dengan nol maka nilai Y sama dengan nilai konstanta yakni sebesar . 37.784 Koefisien regresi b dengan nilai 612 berpengaruh besar terhadap penerapa metode qiroati nahawand, dan berdasarkan besarnya nilai korelasi/hubungan dengan nilai 0,887 yang jika di lihat dari tabel interprestasi berada diantara 0.80-1,000 menunjukkan bahwa antara valiabel X dan variabel Y terdapat hubungan yang sangat kuat.

**Kata Kunci:** *Penerapan Metode Qiro’ati Nahawand, Kemampuan Membaca Al-Qur’an.*
